

Evolución Electoral del MAS en Bolivia

en las Elecciones y Referéndums desde 2005 al 2009

Desde la elección de Presidente Evo Morales Ayma en diciembre 2005, empecé a descargar los resultados finales de todas las elecciones y referéndums nacionales. Inicialmente descargué los resultados hasta el nivel provincial, pero a partir del referéndum revocatorio de agosto 2008 lo hice hasta el nivel municipal. Excepto el referéndum de la nueva constitución del enero 2009, que está detallado solamente hasta el nivel departamental. Lamentablemente me faltó el tiempo y después los resultados ya no fueron accesibles en el sitio web del CNE.

La Producción de las Tablas y Mapas

Los datos de las tablas provienen del sitio web del CNE. Descargué los resultados de los 345 municipios del país e introduje manualmente los votos de los partidos en el programa Excel. En el caso de las elecciones generales recientes se trató de casi 3800 números. Por la cantidad de números introducidos podría pensarse que es fácil hacer errores, sin embargo al comparar las sumas de las provincias y departamentos, resultó fácil verificarlos y corregirlos. Por tanto puedo asegurar que las tablas contienen datos correctos.

Descargué del INE (Instituto Nacional de Estadística) un mapa con las fronteras de los departamentos, provincias y municipios de Bolivia. Hice un escan de este mapa y lo calqué en el programa Autocad.

Categoricé los datos de las votaciones en rangos de 10% a los cuales les asigné una escala de colores que va del azul, vía el blanco, hasta llegar al rojo. Más azul cuanta más votación tiene el MAS y más rojo cuanta menos votación tiene. Azul entero representa entre 90% y 100% de los votos, alrededor de 50% el azul disminuye hasta blanco y rojo entero significa entre 0% y 10%. Con estos colores pinté las superficies de cada municipio del mapa según su rango de votación.

Unas Conclusiones

La serie de mapas muestra muy claramente los lugares donde reside la votación del MAS así como su evolución. Se ve que el área azul creció e intensificó más y más, mientras que el rojo disminuyó y se deslució paulatinamente. La tabla siguiente demuestra este crecimiento entre las dos elecciones generales de 2005 y 2009:

$$\%_{\text{crecimiento}} = \frac{\%_{2009} - \%_{2005}}{\%_{2005}} * 100\% \quad \text{por ejemplo: } \frac{64,2\% - 53,7\%}{53,7\%} * 100\% = 19,5\%$$

	2005	2009	Crecimiento
La Paz	66.6%	80.3%	20.5%
Oruro	62.6%	79.5%	26.9%
Potosí	57.8%	78.3%	35.5%
Cochabamba	64.8%	68.8%	6.1%
Chuquisaca	54.2%	56.0%	3.5%
Pando	20.9%	44.5%	113.4%
Beni	16.5%	37.7%	128.3%
Santa Cruz	33.2%	40.9%	23.3%
Tarija	31.6%	51.1%	61.9%
Extranjero		75.8%	
Nacional	53.7%	64.2%	19.5%

Aunque todavía el MAS no tiene una mayoría en los departamentos de Pando y Beni, es muy llamativo que es justamente en esos departamentos donde su votación creció más, incrementándose por más del doble (113% y 128% respectivamente). Asimismo podemos ver que en Tarija el crecimiento fue tan alto (62%) que le permitió alcanzar la mayoría.

El mapa de las últimas elecciones incluye de forma esquemática los votos de Argentina, Brasil, España y los Estados Unidos. Las superficies de los círculos representan el número de los votos válidos en esos países y tienen la misma escala superficial que el mapa de Bolivia.

Los porcentajes de participación y de los votos válidos también son muy significativos, porque demuestran la validez democrática de una elección. Una participación baja y/o un porcentaje bajo de votos válidos demuestra que la población no cree que su voto realmente importa, que no vale la pena caminar a la urna o que demostrativamente rechazan las elecciones al votar 'blanco'. Por ejemplo, en las Elecciones Presidenciales de los EE.UU. de noviembre 2008 (de Barack Obama) la participación de la población con derecho al sufragio fue alrededor de 55%... (Según la BBC de Inglaterra). En cambio en Bolivia la participación en 2005 fue 84.5%, que ya es alta, pero en las elecciones recientes fue realmente tremendo: ¡94.5%! Al igual el porcentaje de los votos válidos fue bastante alto en ambas elecciones: 92.6% en 2005 y 94.3% en 2009.

Se podría hacer muchos análisis todavía. ¿En qué municipios el porcentaje de los votos nulos es más grande? Quizás sería útil efectuar programas de capacitación en esos municipios para enseñar a la población cómo se vota. En varias provincias de Chuquisaca, Cochabamba y Potosí el porcentaje de votos blancos fue más que 10% y en algunos municipios más que 15%, ¿por qué tanto, qué pasó?

¿Cómo Leer las Tablas?

Las tablas comienzan con un resumen a nivel nacional de las elecciones. Luego siguen las hojas con los detalles de cada Departamento. Los titulares de las tablas indican de qué elección y de qué departamento se trata.

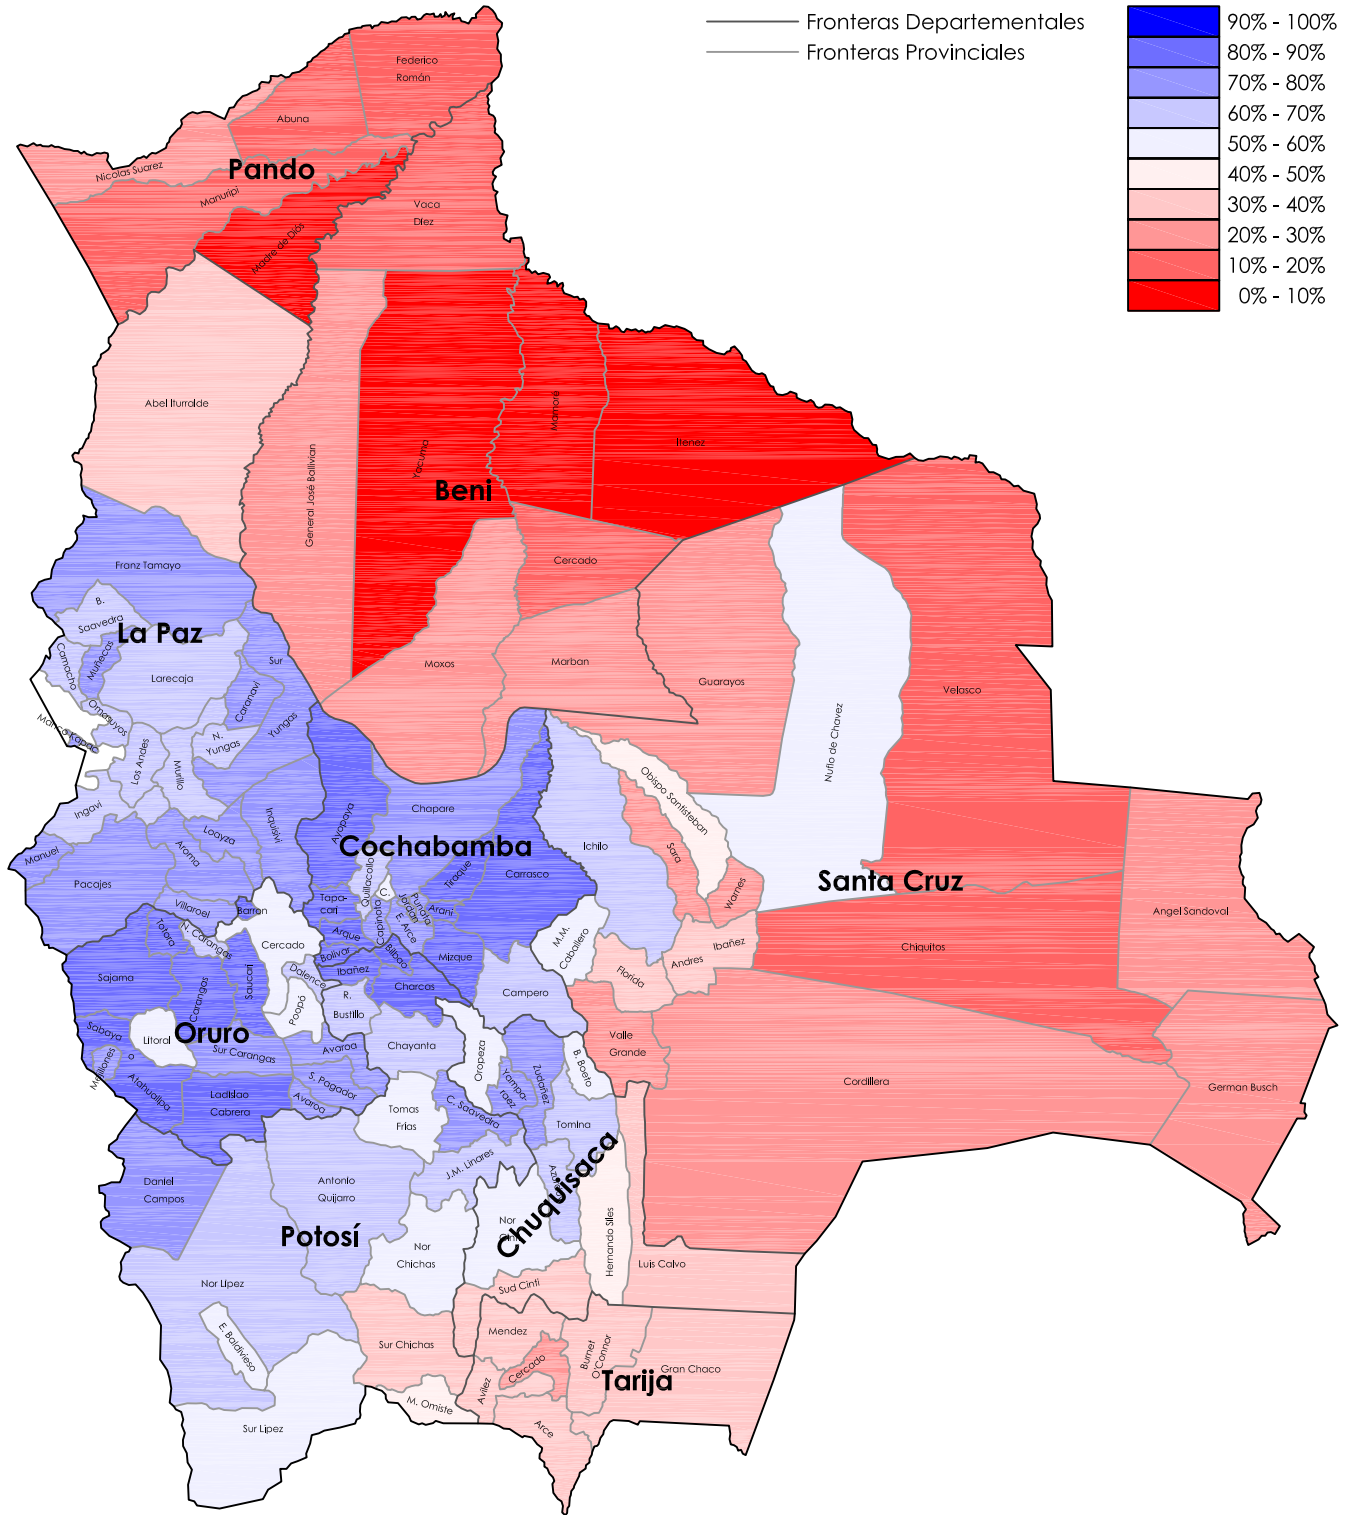

Cuando se trata de elecciones las tablas tienen una anchura de dos páginas por la cantidad de partidos participando. Si se trata de un referéndum (Sí o No) la anchura tiene solamente una hoja. Si la altura de una tabla tiene más que una hoja, primeramente se presenta las hojas de la izquierda hacia la derecha y luego las próximas dos hojas hacia abajo.

Los porcentajes tienen escalas de colores para señalar más fácilmente los valores extremos. Los colores no siempre corresponden con los colores del partido. Los porcentajes de blancos y nulos se hacen más rojos cuando son más altos y más verdes cuando son más bajos. En cuanto a los votos emitidos y válidos es al revés: más alto es verde y más bajo es rojo. Representan un sentimiento democrático tal como lo describimos antes: verde significa 'bueno' y rojo significa 'preocupante'.

Deseo mucho que les agrade estos detalles de las victorias: ¡Jallalla Evo!
